MOBILE SALES PERFORMANCE DASHBOARD REPORT (POWER BI)

Business Problem

In the mobile retail industry, decision-making depends heavily on timely and accurate insights. However, the organization relied on static reports, which resulted in delayed analysis and limited visibility into key business metrics.

The absence of an interactive system made it difficult to:

- Track sales performance in real time
- Analyze customer payment behavior
- Identify top-performing products and regions
- Detect sales trends across time

Objective

The objective of this project is to develop an interactive Power BI dashboard that:

- Provides real-time insights into sales performance
- Enables dynamic filtering across multiple dimensions
- Identifies trends in customer behavior and product demand
- Supports data-driven decision-making

Dataset Overview

The dataset consists of mobile sales transactions with the following attributes:

- Transaction ID
- Day and Month
- City
- Brand
- Mobile Model
- Units Sold
- Price Per Unit
- Payment Method (UPI, Credit Card, Cash)
- Customer Ratings

DAX Measures

- **Total Sales:**

  Calculates total revenue using transaction-level data.

  Total_sales = SUMX(Sales_Data, Sales_Data[Units Sold] * Sales_Data[Price Per Unit])

- **Total Quantity:**

  Represents total units sold.

  Total Quantity = SUM(Sales_Data[Units Sold])

- **Average Price:**

  Calculates average selling price.

  Average = AVERAGE(Sales_Data[Price Per Unit])

- **Total Transactions:**

  Counts total number of transactions.

  Transection = COUNTROWS(Sales_Data)

Dashboard Design & Features

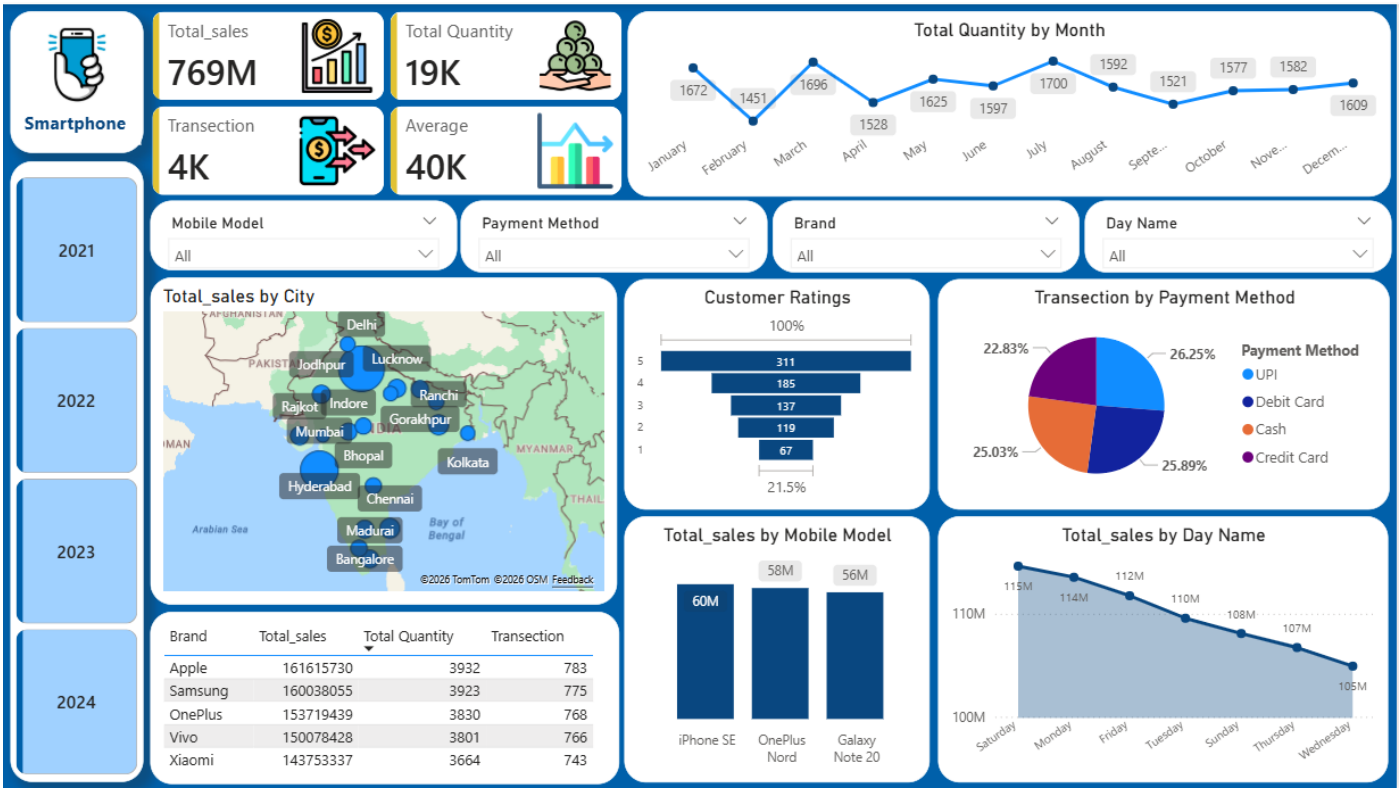
The dashboard is designed using a **Z-pattern layout** to guide users through insights effectively.

Key Visuals:

- KPI Cards (Sales, Quantity, Transactions, Average Price)
- Monthly Sales Trend (Line Chart)
- City-wise Sales Analysis (Map)
- Brand & Model Performance (Bar Charts)
- Payment Method Distribution (Pie Chart)
- Customer Ratings Analysis
- Day-wise Sales Trend

Filters (Slicers):

- Month
- Brand
- Payment Method
- Mobile Model



Analytical Insights

Sales Performance

- Total Sales reached approximately **769M**
- Sales are driven by a combination of volume and pricing
- Mid-range products contribute significantly to revenue

Payment Method Analysis

- UPI accounts for approximately **26% of transactions**
- Digital payments dominate over cash
- Indicates strong customer preference for convenience

Time-Based Trends

- Saturday shows peak sales **(~115M)**
- Certain months (e.g., October) show lower performance
- Weekly patterns highlight operational demand fluctuations

Product Performance

- High-performing models include iPhone SE, Vivo, and Redmi series
- Mid-range smartphones show higher demand
- Premium devices contribute higher revenue but lower volume

Regional Analysis

- Metro cities generate the highest sales
- Some cities underperform, indicating potential growth opportunities

Customer Behavior

- Majority of customer ratings are between 4 and 5
- Indicates strong customer satisfaction
- Positive ratings correlate with better product performance

Business Impact

The Power BI dashboard provides:

- Real-time performance monitoring
- Faster decision-making
- Improved visibility into sales and customer behavior
- Better planning for inventory and staffing
- Identification of growth opportunities

Strategic Recommendations

- Increase focus on digital payment promotions (UPI offers)
- Optimize staffing and inventory during weekends

- Promote high-performing products strategically
- Improve marketing efforts in low-performing regions
- Use customer ratings to enhance product quality

Conclusion

This project demonstrates the effectiveness of Power BI in transforming raw data into actionable insights. The developed dashboard provides a comprehensive view of sales performance and enables data-driven decision-making.

By integrating data visualization, modeling, and analytical techniques, the solution addresses key business challenges and provides valuable insights that can drive growth and efficiency.

Future Scope

- Implement sales forecasting using Power BI
- Integrate real-time data sources
- Develop customer segmentation models
- Deploy dashboard on Power BI Service
